EcoVia™ IB

insect blok

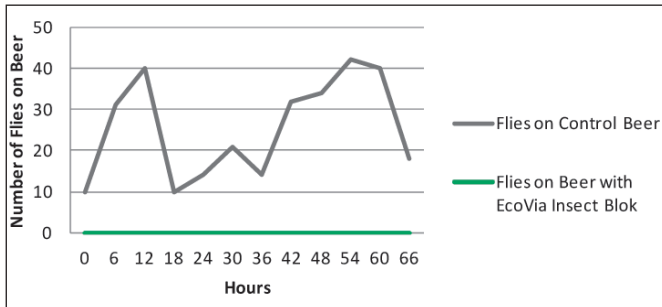

Research-Based Botanical Insecticide

EcoVia IB is a novel insecticide blok for enclosed space fumigation and specific site repellency. Perfect for small fly control and repellency in food areas.

New Product

EcoVia Insect Blok Repellency Test

A cup containing 1 oz beer was placed at each end of a 6' table in an open room with a population of fruit flies and other competing food sources. On one side, an EcoVia Insect Blok was placed next to the cup, in water, and 0.5g of Blok material was also added to the cup of beer. There was no treatment to the cup of beer at the other end of the table (control). The number of flies seen on or immediately adjacent to each cup of beer was recorded periodically.

Product Codes:

EVIB036: 36 x 50 g beverage tray bloks
EVIB015: 15 x 100 g bloks

Fumigation Efficacy of EcoVia Insect Bloks

Dry EcoVia Insect Bloks were placed in 15 gallon aquariums with adult fruit flies. Three tests were done:

5% Ventilation: The top was completely closed with plexiglass, except for a 4" hole covered by a light polyester cloth

50% Ventilation: The top was 50% covered with plexiglass and the other 50% was covered with a light polyester cloth

100% Ventilation: The top was covered only with a light polyester cloth.
