

InVade[™] technology Mini Doser[™]

Programmable Dosing Pump for Use Anywhere Bio Remediation is Needed

The New InVade[™] Mini Doser[™] is a system for any situation where continuous microbial dosing is needed. It will automatically dose the correct amount of InVade[™] Bio Remediation (page 38) daily. The built-in digital timer is located inside the pump chassis to eliminate tampering. The pump unit snaps off the mounting bracket to easily access the timer in the back (see picture to right) The powerful microbe concentrate digests grease and other scum, dramatically increasing the time between grease trap pump outs or drain maintenance. InVade[™] Bio Remediation is 100% natural, with no chemicals or pesticides. The amount of concentrate used depends on the trap size. A one gallon jug of InVade[™] Bio Remediation will last

for 90 days, for grease traps up to 500 gallons in size. InVade[™] Bio Remediation concentrate is purchased separately in one gallon jugs.

Product Code: IDDS316 - one pump, tubing, fittings, and a wall mounted basket to hold a gallon jug of InVade Bio Remediation (sold separately)
