

# PFT<sup>TM</sup>

station

## ***Green In-Ground Station for Baiting, Trapping & Monitoring Crawling Insects & Slugs***

The **Green PFT<sup>TM</sup> Station** has a discreet, low profile (barely 1") when installed and is easy to place in the ground with a 2" termite station auger (with the hole reamed a bit wider at the top) or a standard bulb planter. The included anchors secure the tamper-resistant station in the ground. The cover removes easily with no tools or special keys needed. The sturdy cup can be quickly removed for cleaning without removing the station from the ground.

Instruction sheets are available at
