

InVite™

kil zone

Potent Liquid Attractant for House Flies and Other Filth Flies

InVite™ Kil Zone™ is an innovative, liquid attractant for house flies, stable flies, and blow flies. The proprietary combination of 17 ingredients including, pheromone, food, and breeding site attractants does not have an overbearing smell. A "kill zone" can be created by spraying a surface such as the side of a dumpster with InVite™ Kil Zone™ and then spraying over it with LambdaStar™ 9.7% CS or FenvaStar™ EcoCap™ or non-repellent spray. Flies are attracted to the zone and land on the residual and die. InVite™ Kil Zone™ is ideal for use outdoors on or around dumpsters and loading docks. InVite™ Kil Zone™ may also be used indoors. It may also be sprayed inside light traps to increase speed of capture. InVite™

Kil Zone™ can also be used in the Yellow PFT™ Station (*page 27*) or other jar traps, for trapping flies without the use of pesticides.
