

InVite™

roach lure

Extra Strength Gel Lure for German, American, Oriental & Smoky Brown Cockroaches

InVite™ Roach Lure gel is a powerful attractant for cockroaches. The gel can be directly applied to monitor boards. This helps to detect cockroaches where there may only be a light infestation, increasing the capture rate by a factor of four. InVite™ Roach Lure gel can also be used in problem accounts to attract cockroaches into bait stations, as it will draw them more strongly than a standard gel bait. If cockroaches aren't taking bait, BorActin™ 99% Boric Acid Dust can be

applied along with InVite™ Roach Lure Gel to draw the cockroaches through the dust.
