

Get Control of Small Flies,

Turn the Scum into Bait!

BorActin™ insecticide powder

- The ideal small fly treatment is to treat scum and organic build-up with BorActin, an ultra-fine milled boric acid dust.
- Effectively turns the food source for small flies (scum and organic build-up) into a lethal “bait” that kills adult small flies and small fly larvae.
- Versatile label: Use as a liquid spray, foam, mop solution and as a drain treatment.
- Can be applied when the facility is in operation.

Guide to Effective Small Fly Control

1. Dust drains and other scummy areas with **BorActin Insecticide Powder** to quickly kill both adults feeding on the scum and maggots living in the scum.
OR address both small fly and sanitation problems by mixing 4 oz of **BorActin** with each gallon of a bio sanitation foam solution, and applying to drains and other areas with organic build-up monthly.
2. Every 6-12 months, dust **BorActin** into construction voids and other “mystery” voids to prevent these areas from becoming breeding sites.
3. Once a week, create a mop solution with the pre-measured **BorActin Mop Packets** for use in problematic scummy areas to augment the treatment listed above.
