

InVite™

liquid lure

*Attracts Yellow Jackets,
European Hornets and Fruit Flies*

Concentrated Formula • Contains No Pesticides

Directions For Use

Shake well and pour 1-4 oz (depending upon level of alternative food in the area) of InVite Liquid Lure into the cup of the PFT Station or similar trap, and add water, soda or beer to fill the cup about half full. This product will also attract phorid flies and can be enhanced for this use by adding a small amount of Rockwell's InVite Kil Zone to the mixture. Hang the trap in areas where target pests are present. To create a killing station, spray or wipe the trap with a micro-encapsulated residual insecticide. Replace when the cup is full or after one month. Submerge station in water prior to disposing of cup to kill any insects left alive. For use in ILTs, place InVite Liquid Lure in a small container such as Rockwell's BaitPlate, then place in or on the ILT. To use on a glueboard, place a large cotton ball on the glue and saturate with InVite Liquid Lure. For greater convenience on glueboards, use InVite Fruit Fly Lure Gel instead. Avoid ingestion and inhalation of fumes for extended periods. Store out of reach of children. For long term storage, avoid excessive heat. Used or left over InVite Liquid Lure and dead insects may be disposed of on site.

Net Contents 16 fl oz • EPA Est. No. 73079-MO-I
