

## Low Volume Sprayer Kits

### Aprehend® works!

Sold only to professionals, Aprehend® is a revolutionary fungal biopesticide for the elimination and prevention of bed bugs.

Spores transfer easily among bugs, including those that don't leave the harborage. The fungal disease kills bed bugs in 3-7 days and prevents new infestations for up to 3 months.

### Less mess, more profit.

Our clients confirm they are saving time, winning new contracts and improving profits, all thanks to EPA-registered Aprehend®.

- Fast application
- Lower labor costs
- Requires less preparation by residents
- Results in days, up to 3-month residual
- High effectiveness, proven in the field
- Kills even resistant populations

**NOW SOLD ACROSS THE NATION!**

The professional's  
**secret weapon**  
against bed bugs.

**One visit...  
no call-backs!**

#### Kit Includes:

**New Biopesticide that Eliminates Bed Bugs!**

Field-Tested...  
**Proven to Work!**

## Case Study 1: Apartment Complex

HTP Termite and Pest Control - Huntingdon, TN

Groundbreaking. Revolutionary.

### The Challenge

This 32-unit complex had been battling bed bugs for more than 6 years with no success. Half of the apartments showed visual signs of infestation, and 2 adjacent units — heavily soiled with bed bug feces — were the probable source. New management was eager to get rid of bed bugs...permanently.

### The Solution

HTP Termite & Pest Control won the bid for this job thanks to its plan to use time- and money-saving Aprehend®. Treatment of the entire 32-unit complex, including connecting hallways, took 2 days using 4 technicians and a total of just 80 ounces of Aprehend® (an average 2.5 ounces per one-bedroom apartment). Only five apartments, including the two badly infested units, received a second application 30 days later.

### THE RESULT

**Sixty days after the initial treatment, HTP found no evidence of live bed bugs in any apartment, and management had received no further complaints. Based on this success, HTP was awarded the annual contract for general pest and termite control at this complex.**

## Case Study 2: Single-Family Home

Peace of Mind Pest Control - Indianapolis, IN

Totally astonishing.

### The Challenge

A family of 4 lived in this 3-bedroom home. Bed bugs infested the son's room and had spread throughout the house. The parents researched online, learned about Aprehend® and asked ConidioTec for a referral to a local contractor.

### The Solution

Peace of Mind Pest Control applied Aprehend® around bed frames and legs, other furniture, electrical outlets and switches, and along baseboards. *Treatment took 1 hour and used 9 ounces of product.*

### THE RESULT

**PMPC told the homeowners to call if they detected any live bed bug activity. Four months after treatment — still no calls. The pest control company now uses Aprehend® for many infestations, including tough jobs it previously would have declined. PMPC loves Aprehend®'s cost-effectiveness — 1 fast application, no follow-up treatments and no call-backs.**

## Case Study 3: Mobile Home

Triple B Pest Solutions - Poteau, OK

Massive die-off of bed bugs.

### The Challenge

Residents of a bed bug infested mobile home had been using off-the-shelf pesticide products for more than 18 months. Each application killed some bugs, but the population always "came back" and could be seen crawling on the walls and ceiling.

### The Solution

Due to long-term misuse of retail products, Triple B Pest Solutions knew the bed bugs could be resistant to pesticides and recommended Aprehend®. The technician applied a total of 3 ounces of Aprehend® around the tops of baseboards; around light fittings, electrical outlets and door frames; and to the perimeters of furniture, including bed frames.

### THE RESULT

**After 1 week, the only live bed bugs found were lodged in the tufts of the couch, where Aprehend® could not be applied; the technician sprayed these bed bugs with a contact insecticide, no other treatment was applied. During follow-up inspections at 2 weeks and 3 months, the mobile home remained free of bed bugs. Triple B now relies on Aprehend® for bed bug jobs and no longer offers standard chemical treatments.**
